Medicine

Today’s routine

- [x] Minoxidil 5%, morning
- [ ] Scalp massage, evening

About common medicines

Minoxidil (topical)
Extends the growth phase. Results take 3 to 6 months.

Finasteride (tablet, men)
Lowers DHT. Prescription only, doctor review first.

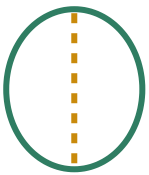

Iron, vitamin D, biotin
Help only if a blood test shows you are low.

General information only. A doctor should confirm the cause of hair loss before prescription treatment.

Scan your hair

Take a clear photo and we will point out visible signs and what to ask a doctor about.

Line up your parting with the dotted line

For the best result

- Use daylight or bright, even light
- Take the crown, the hairline and the parting
- Keep hair dry and without a cap or product

What we can see

Crown	**Thinning, moderate**
Parting	**Wider than normal**
Scalp	**Mild flakes**

Medicine to ask your doctor about

Minoxidil 5% (topical)
For thinning at the crown. Use daily for 3 to 6 months.

Ketoconazole 2% shampoo
For flakes and scalp irritation. Use twice a week.

Blood test: iron, vitamin D, thyroid
Low levels can add to shedding.

Sample result. This is based on the photo only and is not a diagnosis. See a dermatologist before starting prescription medicine.
